

RF::ViPer Library Development Training

Overview

RF::ViPer Library Development Training

A decorative blue line that starts from the bottom of the title, loops around, and then extends horizontally to the right, ending at the top of the graduation cap icon.

In this interactive training course, you'll have the opportunity to create a function block for an RF::ViPer library together with our experienced trainer. You'll learn not only how to develop the block itself, but also how to write the corresponding rule and import files. These files are essential to ensure that the block is automatically integrated into your project and linked to the relevant signals. Through interactive exercises and individual support, you'll gain valuable insights into library development and be able to apply your knowledge directly.

Whether you choose the online option or attend in person at our office in Weingarten, you'll benefit from a practical and engaging learning environment.

You'll also gain access to our EKS Hub, where new features and advanced content are presented through short screencasts and documentation.

CONTANT

Write function block in
RF::ViPer

Create the
visualization

Create the rule and
import files

Requirements

A basic training course must have already been attended or booked together, or sufficient experience in using the RF::Suite must be present.

Hardware

For the training, each participant will be provided with a computer to which they can connect remotely.

The training plant will be set up together on these computers.

Target Groups

- Decision-makers
- Planners
- Programmers, project engineers and commissioning engineers
- Maintenance and service personnel
- Innovators

Duration

The training course is scheduled for **one** day.

Language

German, English

Maximum number of participants

5
